

# Sage Master Builder

Dear Sage Customer,

Our goal at Sage is to provide our customers with continuous value that goes far beyond their initial software investment. That's why every software update you receive is designed to ensure that your software continues to help you maximize the efficiency and productivity of your business. It's proof of our commitment to you as a Sage Master Builder Estimating customer and service plan subscriber.

We take great pride in serving our customers well and hope you'll find the following enhancements useful:

- **Add line item attachments faster and easier** - You can now attach an item, such as a PDF file, text file, image file, or hyperlink to a database item. Simply right-click on any line item in an estimate spreadsheet to attach an item—or add attachments from within the Database Item window or the Detail window.
- **Easily reprice crews using the Estimate Information window** - In previous releases, Sage Master Builder Estimating required you to use the Reprice Crews feature to change the crew rate table. You can now reprice estimate items by selecting another rate table on the Crew Pricing tab of the Estimate Settings window.

Once again, we hope your company benefits greatly from the enhancements we've incorporated into this latest release. Your satisfaction and your company's success really are important to us, which is why we will continue to strive toward providing you with the best overall customer experience possible.

Thank you for your business.

Sincerely,

Sage Master Builder Team
