Product update release notes

Thank you for choosing a Sage business management solution.

These release notes contain important information about Australia Tax Reports, including information about product changes that are not in the documentation.

Change of program name

Each Sage 300 program has a two-letter name. When we originally released Australia Tax Reports, we gave it the name TA. We subsequently found that this name is already used, so we have changed the name of the program to TW. If you have installed the previously released TA version of this program, you must uninstall it before you install this update.

About product updates

Product updates contain modified versions of one or more program components. A product update is not a full upgrade or a product replacement. Each product update is valid only until we release the next product update or the next version of Australia Tax Reports.

Product updates are cumulative. This means that all previous updates for this product and version, and any hot fixes or patches previously released are incorporated into this update.

Software requirements

To use Australia Tax Reports 6.6A, you must have Sage 300 2019.1 or later.

What's new in 6.6A

This product update does not include new features or improvements. It only changes the two-letter program name from TA to TW.
