# Product update release notes

Thank you for choosing a Sage business management solution.

These release notes contain important information about United Kingdom Taxes, including information about product changes that are not in the documentation.

## About product updates

Product updates contain modified versions of one or more program components. A product update is not a full upgrade or a product replacement. Each product update is valid only until we release the next product update or the next version of United Kingdom Taxes.

Product updates are cumulative. This means that all previous updates for this product and version, and any hot fixes or patches previously released are incorporated into this update.

## Software requirements

To use United Kingdom Taxes 6.7A Product Update 1, you must have Sage 300 2020.1 or later.

# What's new in 6.7A Product Update 1

This product update includes the following new features and improvements.

## Report transactions that are within a date range for which you have already submitted a return

If you need to report a transaction but you have already submitted a return for the document date of the transaction, a new **Include unreported transactions dated on or after** option on the VAT Return screen allows you to do this. You select the option and then enter the document date of the transaction or an earlier date. In addition to transactions that would normally be included, the current return will include any unreported transactions with a date between the specified date and the From Document Date for the return.

## Fix for multicurrency systems

If you use multicurrency accounting, all amounts are shown and reported in your reporting currency. (Previously, some amounts could be in your functional currency.)
